

Project Update:

Cleaning & Painting Interior & Exterior Surfaces of the Morlot Avenue 1.0 MG water Storage Tank

During the installation of the exterior containment system, required for the rehabilitation work, it was discovered that an active Raven nest exists. There are young nestlings, recently hatched, in the nest on the upper section of the Water Tank. The native birds and their nests are protected by Federal and New Jersey Law. The nesting period for the ravens is approximately six weeks. It is estimated the young will be nested until the third week of May. Rehabilitation work will be suspended until this time and then begin immediately until completion. The Borough will be working closely with NJDEP Division of Fish and Wildlife as well as the Bergen County Audubon. The Borough thanks you for your understanding.
